

DriverPass Business Requirements Document

Purpose

This Business Requirements Document (BRD) defines the business, functional, and non-functional requirements for the proposed DriverPass platform. The document translates stakeholder needs into a structured set of requirements for a web-based driver education system that supports online instruction, practice testing, lesson scheduling, and DMV policy updates.

System Background

- DriverPass sought to modernize driver education by providing students with a centralized platform for online instruction, practice testing, lesson scheduling, and DMV policy updates.
- The platform provides secure, role-based access for students, instructors, administrative staff, and system administrators.
- The solution supports cloud-based access from any location with an internet connection while tracking operational activity and maintaining current DMV information.

Business Objectives

- Provide students with online driver education courses and practice examinations.
- Enable students to schedule, modify, and cancel driving lessons.
- Provide secure user registration, authentication, and password recovery.
- Maintain synchronized DMV policy updates.
- Support employee activity tracking and reservation management.
- Provide role-based dashboards and reporting capabilities.
- Improve the overall student experience through a centralized web-based platform.

Functional Requirements

- The system shall validate user credentials during login.
- The system shall allow students to register, purchase packages, schedule lessons, and track progress.
- The system shall synchronize with the DMV to provide policy updates.
- The system shall track reservations, lesson assignments, and employee activities.
- The system shall provide role-based access based on user type.
- The system shall allow administrators to generate reports and manage package availability.
- The system shall support automated password recovery.

Non-Functional Requirements

Performance

- The system shall be web-based and support modern web browsers.
- The system shall provide performance suitable for streaming instructional video.
- Routine updates shall minimize service disruption.

Platform

- The solution shall operate as a cloud-based application.
- The system shall maintain a centralized database.
- The platform shall integrate with DMV information services.

Security

- Passwords shall be required for authentication.
- Data exchanged between client and server shall be encrypted.
- The system shall notify administrators of suspicious login activity.
- Students shall be able to securely reset their passwords.
- IT administrators shall have privileged account management capabilities.

Usability

- The interface shall provide role-specific dashboards.
- Users shall access the system through a standard web browser.

Assumptions

- Users have reliable internet connectivity.
- Users access the platform using supported devices and browsers.

Known Limitations

- Offline data modifications are not supported.
- Package definitions cannot be added or removed without administrative changes.
